

*Safeguarding a
Sustainable Future*

Message From the Director

Our legacy of protecting, sustaining and improving Missouri's natural and cultural resources continues. We strive to enrich the quality of life for all by cultivating and strengthening our partnerships throughout the state. When you visit our state parks and historic sites, our stewardship, recreational diversity and interpretation offer outdoor enthusiasts of all ages the opportunity to hike, camp, bike, explore and more.

Just as importantly, our team works with businesses, communities and citizens to safeguard our air, land and water. We are committed to working cooperatively with our partners and stakeholders to manage all the natural resources that make Missouri special. We preserve resources not only for today, but also for future generations who will depend on them.

We hope to inspire you to value our natural resources as your own. We look forward to having you join us in Missouri's great outdoors!

Dr. Buntin

Our Vision: Improving the Quality of Life for Missourians

The Missouri Department of Natural Resources is committed to helping landowners, municipalities and businesses thrive by fostering long-term sustainability and preserving Missouri's scenic, cultural and recreational resources.

By protecting our resources, we promote a sustainable future for our citizens, communities and state, ultimately improving the quality of life for all Missourians.

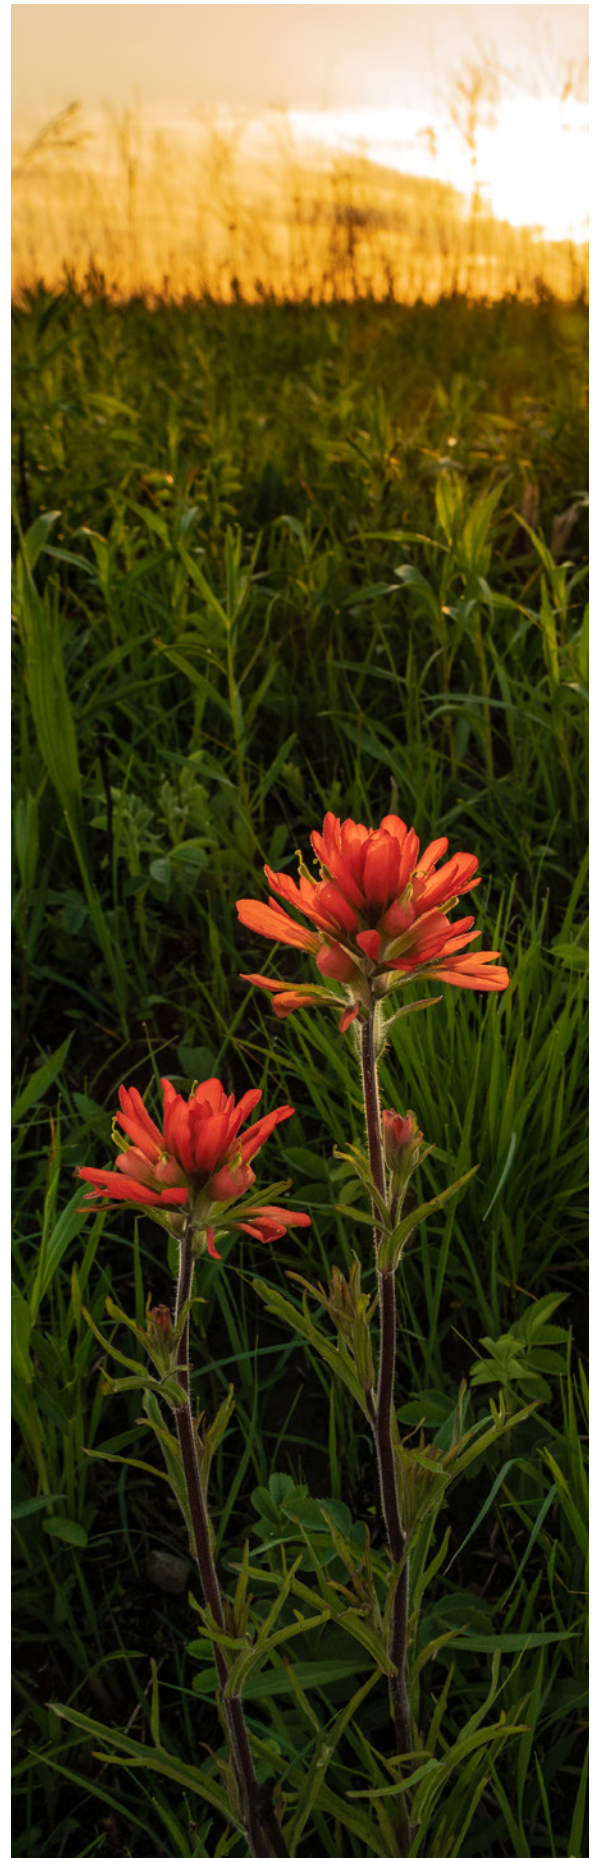

A Sustainable Future

We help communities thrive through financial assistance. Each year, the department passes approximately \$500 million to communities to improve drinking water and wastewater infrastructure, protect water quality, manage hazardous waste, provide recreational opportunities, preserve our history and support energy programs in local communities.

We also provide financial opportunities and technical assistance to Missouri's agricultural community. Annually, the department passes approximately \$43 million of funding to local Soil and Water Conservation Districts, with more than \$30 million going directly to farmers in the form of cost-share assistance.

For more than 100 years, the Missouri State Park system has provided memorable scenic, recreational and cultural experiences to its visitors. To keep up with increasing visitor demand, \$68 million in revenue bonds and federal grant funding is being used to construct new cabins and campsites or renovate and improve existing structures at nearly two dozen state parks and state historic sites.

Missouri has set a national example of how former railways can benefit communities, making the state a premiere hiking-and-biking destination. Doubling down on this accomplishment, the department recently began development of the Rock Island Corridor, a hiking-and-biking trail that has the potential to form a 400-mile loop when connected to the scenic and award-winning Katy Trail State Park. Projects like these are a continuation of our commitment to improving and maintaining infrastructure at Missouri's 92 state parks and historic sites.

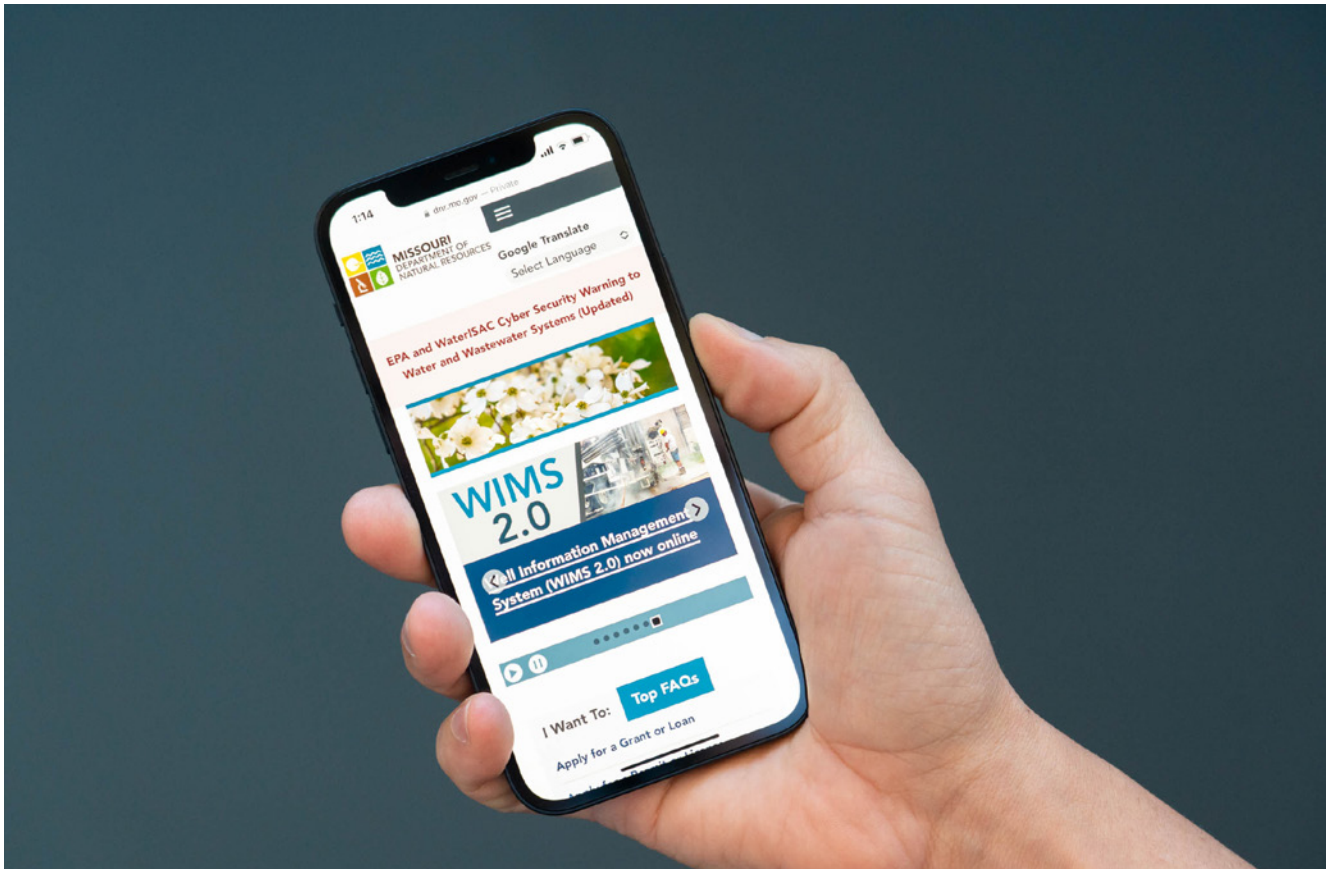

Partnerships for Success

Partnerships allow us to cooperatively leverage resources and expertise to accomplish groundbreaking success. The department works with local levee board members, county officials, the U.S. Army Corps of Engineers and others to expand planning efforts for flood protection across Missouri. These efforts are integral to developing new approaches to flood protection infrastructure on the Missouri and Mississippi rivers, such as the Atchison County Levee Setback Project. This project, in northwest Missouri, is one of the largest levee setback projects on the lower Missouri River in many years and will reduce damages from future floods.

The department works with stakeholders to identify and address future energy needs and opportunities, and with businesses, communities and citizens to answer questions, gather feedback and resolve natural resource issues as fast and effectively as possible.

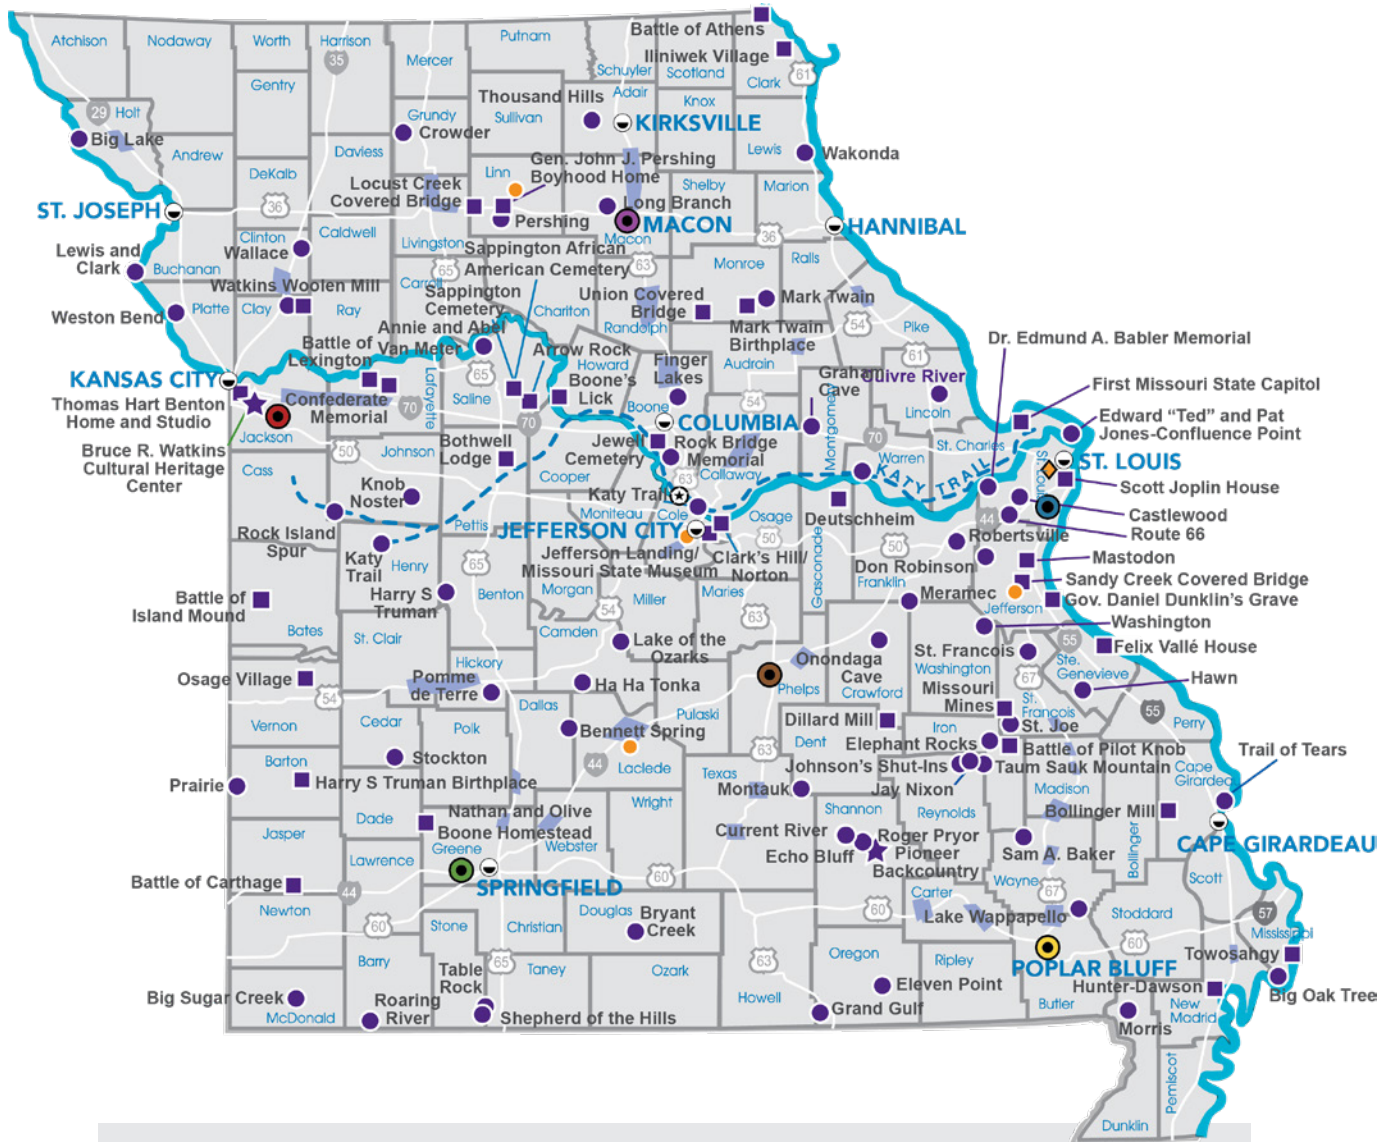

A Data Hub for Missouri

Having access to data helps Missourians make informed decisions. We provide a variety of data to the public, such as GIS datasets and applications, including interactive maps that provide well construction requirements, groundwater data and other geologic content, as well as an online State Parks and Sites Status Map that displays real-time information about closures and information that may impact an upcoming trip for visitors.
